

HOW ISOLITE CAN HELP IMPROVE YOUR CEREC PROCEDURES

BENEFITS TO YOUR PRACTICE

**INCREASE PRODUCTIVITY.
INCREASE PROFITABILITY.**

Isolite Systems provides a solid foundation for restorative success during all aspects of the CEREC process. From scanning to delivery, Isolite helps you work efficiently without having to deal with the tongue, saliva, swallowing, or aspiration.

**REDUCE LOSS OF REVENUE FROM RE-DO'S.
HIGHER COLLECTION RATES.**

Decrease restorative failures by eliminating fluids, humidity, and debris from the work area with Isolite. Improve the efficacy of cementation and bonding, providing consistent clinical outcomes and a positive patient experience.

**EFFICIENT STAFF COSTS.
STAY AHEAD OF SCHEDULE.**

Your dental assistant is not required to stay chairside, enabling them to perform other tasks to get ahead of procedures. Educating staff how to capture images is even easier and faster because the maxillary and mandibular quadrants are isolated hands-free.

**FEWER NO-SHOWS.
IMPROVE YOUR PRACTICE'S REPUTATION.**

Patients are more comfortable and feel safer with Isolite, improving their experience in your practice. Chair time is reduced, increasing the probability of your patients coming back for their next appointment.

BENEFITS TO CLINICIANS

SCANNING

Scan an arch in seconds. Increase the clarity of digital impressions by continuously evacuating saliva, excess moisture, and oral humidity that can compromise the precision of the scan.

PREPARATION

Throat and airway are obturated, minimizing the potential for swallowing and aspiration of instruments, implant, and restorative components. Fluids and debris are easily managed and quickly evacuated for a clear work area.

SEATING CROWNS

Cementation is performed in a dry field, reducing crown failure with fewer recurrent caries under crowns. Protect against accidental aspiration and ingestion of materials and debris by obturating the throat without obstructing the airway.

POWDERING

Isolite evacuates aerosols, moisture, and excess powder, providing an optimum scanning environment. Isolite retracts allows you to powder any tooth with the tongue out of the way.
