Simple.
Esthetic.
Efficient.

Uveneer: The only direct composite veneer template system

Uveneer is a unique, minimally invasive template system with predictable shape and symmetry. It facilitates quick and reliable, high-quality, natural-looking composite restorations in one visit and works with any preferred composite. Uveneer prevents the oxygen inhibition layer during curing, resulting in a hard, glossy surface. It is autoclavable and reusable, making it a cost-effective choice.

Uveneer™ Templates

- A unique, minimally invasive template system with predictable shape and symmetry.
- Quick and reliable, high-quality, natural-looking composite restorations in one visit.
- Prevents the oxygen inhibition layer during curing, resulting in a hard, glossy surface.
- Autoclavable and reusable, making it a cost-effective choice.
- Works with any preferred composite.
- Allows light to pass through the template to the composite for effective curing.
- Releases easily from cured composite resin.
- Requires minimal adjusting or polishing, saving time.
- Facilitates application on individual or multiple teeth.
- Can also be used for cosmetic mock-ups, shade selection, and temporaries during porcelain veneer creation.
